Effective treatment of:

- Ferrous and Ferric Iron
- Hydrogen Sulfide Gas (sulfur/rotten egg smell)
- Manganese

Iron, manganese, and hydrogen sulfide gas are problem elements often found in private well systems. MEGAbite iron filters use oxygen injection to remove damaging minerals and unpleasant odors in a natural, effective, environmentally friendly manner.

The MEGAbite water filtration system features a single filtration tank. Water is first exposed to an internal pocket of air, oxidizing dissolved iron, manganese, and sulfur out of solution. Using a special filtration media, it is then scrubbed of these offensive particles, producing clean, colorless, odorless water.
