

Our InverterFlex® multi-zone units let you condition one up to five rooms with just one outdoor unit (depending on model). The contractor can design a system that best meets the load requirements of each room being conditioned because indoor air handlers can be mixed and matched—including high wall mount units and ceiling cassettes in the same installation.

A single outdoor condenser is sized for multiple indoor air handlers. These 9,000, 12,000, 18,000 and 24,000 BTUH indoor units can be mixed, up to the point that their combined capacity reaches the total allowable system capacity—see the chart on page 3. All units must operate in the same mode except fan only can always be selected. Indoor units are a subtle white color; ceiling cassettes have an attractive white panel.

InverterFlex® models incorporate all the advantages of twin rotary inverter compressor technology. The compressor speed is variable, depending on the load demand. Most of the time the unit runs at low frequency, saving energy while maintaining comfort, but ramping up to higher frequency when needed. Temperature fluctuations and compressor on/off cycling are eliminated, and indoor air quality is enhanced because air is constantly being pulled through the filters and dehumidified.

True zone control is possible because each air handler operates independently. InverterFlex® systems are also great for larger spaces such as fellowship halls and commons areas: install one or more units for quiet, efficient,

Cool and heat up to five rooms/separate areas with a single outdoor condenser.

Features

- Random Swing—Continually adjusts air direction for a gentle, breeze-like effect preferred by most people
- Multiple Modes—Cooling, heating, fan only, dehumidification only, plus sleep mode / 24-hour timer / turbo mode; also intelligent pre-heating and self-diagnostics
- Low Ambient Operating Range—
 Cooling 23° 118.5° F, heating 5° 80.5° F
- Auto Operation—Automatically selects the mode required to maintain a constant temperature/humidity level
- "I Feel" Function—Remote senses temperature at its location and adjusts air flow for comfort and efficiency
- Superior Filtration—Silver ion air filter releases silver ions that eliminate bacteria in the air; gold fin evaporator coating on high wall mount units and blue fin coating on ceiling cassettes inhibits bacterial growth
- Auto Defrost—Defrosts only when necessary to save energy, limit downtime

Mix and match indoor units up to the maximum BTUHs allowed for each system—see chart on following page for matches.

Order outdoor and indoor units separately:

"A" indicates outdoor unit and "B" indicates indoor units.

For instance, a 36,000 BTUH trizone might consist of one A-VFH 36QA-I, two B-VFHI2MA-I and one B-VFHI2CA-I.

* Always follow local, state and national electrical codes. Main power connection is 208-230V.

Recommended Indoor/Outdoor Connecting Cable (SJOW)— 14 AWG / 4 conductor 600V THHN unshielded stranded bare copper, not to exceed 98 feet between indoor and outdoor units

- ¹ Min. 10 ft. line set length recommended.
- Oil traps should be installed every 16.5 to 23 feet (5-7m) when the outdoor unit is installed above the indoor unit.
- **Flare nut and tubing assembly included with outdoor unit.

Ambient Operating Temperature Range: 23° - 118.5° F (cooling);

5° - 80.5° F (heating)

Indoor Unit Mix 'n' Match Possibilities

The total capacity for ALL indoor units cannot exceed 150% of the stated condenser capacity. For best performance, the indoor units' total capacity should be 100% or less of the condenser capacity. When a system is sized beyond 100% of the condenser capacity, the

compressor may not provide full capacity for all indoor units: sizing above 100% is generally specified when one or more of the indoor units will not be in use most of the time. Also, the total capacity for ALL indoor units cannot be less than 50% of the condenser's capacity.

Heat Controller has been delivering confidence for over three-quarters of a century.

That's the confidence that comes from dealing with a company that's been around for generations. Founded in 1933, we can actually trace our beginnings to the Wingert Furnace Company which began building coal, gas and oil furnaces in 1907. Headquartered in Jackson, Michigan, since 1955, our facility, our staff and our product offerings have grown over the years to meet changes in the HVAC industry, including emerging technologies and regulatory requirements.

In May 2013 Heat Controller (and with it, Aitons' Equipment of Canada) became part of the MARS Company, a a leading supplier of HVAC/R motors and components. The resulting partnership is dedicated to meeting our customers' parts and equipment needs, and to continuing to provide unparalleled customer service.

Due to ongoing product improvements, specifications and dimensions are subject to change and correction without notice or incurring obligations. Determining the application and suitability for use of any product is the responsibility of the installer. Additionally, the installer is responsible for verifying dimensional data on the actual product prior to beginning any installation preparations.

Incentive and rebate programs have precise requirements as to product performance and certification. All products meet applicable regulations in effect on date of manufacture; however, certifications are not necessarily granted for the life of a product.

Therefore, it is the responsibility of the applicant to determine whether a specific model qualifies for these incentive/rebate programs.
